COULD YOU USE A KICKSTART?

See inside for valuable savings offer

Please see Important Safety Information on pages 8-9. Click here for Medication Guide and click here for full Prescribing Information for KOMBIGLYZE XR (5/500, 5/1000, 2.5/1000 mg tablets), including Boxed WARNING about possible lactic acidosis.
Important Safety Information for KOMBIGLYZE XR

KOMBIGLYZE XR can cause serious side effects, including lactic acidosis. Metformin, one of the medicines in KOMBIGLYZE XR, can cause a rare, but serious, condition called lactic acidosis (a build-up of an acid in the blood) that can cause death. Lactic acidosis is a medical emergency and must be treated in the hospital. Call your doctor right away if you have any of the following symptoms, which could be signs of lactic acidosis: feel cold in your hands or feet, feel dizzy or lightheaded, have a slow or irregular heartbeat, feel very weak or tired, unusual (not normal) muscle pain, trouble breathing, feel sleepy or drowsy, or have stomach pains, nausea or vomiting.

Most people who have had lactic acidosis with metformin have other things that, combined with the metformin, led to the lactic acidosis. Tell your doctor if you have any of the following, because you have a higher chance for getting lactic acidosis with KOMBIGLYZE XR if you have severe kidney problems, your kidneys are affected by certain x-ray tests that use injectable dye, have liver problems, drink alcohol (very often or a lot of alcohol in short-term “binge” drinking), get dehydrated (lose a large amount of body fluids), have surgery, have a heart attack, severe infection, or stroke.

Managing type 2 diabetes can be challenging. Especially if you’re taking metformin and finding that it isn’t doing enough to get your A1C numbers to goal. For some, combining metformin with another kind of type 2 medicine may work better. This combination pill could be the kickstart you need.

What is KOMBIGLYZE XR?

KOMBIGLYZE XR is a prescription medicine that contains saxagliptin and metformin hydrochloride. KOMBIGLYZE XR is used with diet and exercise to help control high blood sugar (hyperglycemia) in adults with type 2 diabetes. Your doctor will decide if treatment with both saxagliptin and metformin is right for you. KOMBIGLYZE XR should not be used to treat people with type 1 diabetes or diabetic ketoacidosis (increased ketones in the blood or urine).

Please see Important Safety Information on pages 8-9. Click here for Medication Guide and click here for full Prescribing Information for KOMBIGLYZE XR (5/500, 5/1000, 2.5/1000 mg tablets), including Boxed WARNING about possible lactic acidosis.
Who should not take KOMBIGLYZE XR?

Do not take KOMBIGLYZE XR if you:
• have kidney problems. Your healthcare provider should do blood tests to check how well your kidneys are working before and during your treatment with KOMBIGLYZE XR.
• are allergic to saxagliptin, metformin, or any of the ingredients in KOMBIGLYZE XR. Symptoms of a serious allergic reaction may include: swelling of the face, lips or throat, difficulty swallowing or breathing, swelling of the skin, hives, rash, itching, flaking, or peeling. If you have any of these symptoms, stop taking KOMBIGLYZE XR and contact your healthcare provider or go to the nearest hospital emergency room right away.

PROVEN TO LOWER A1C LEVELS

for patients whose blood sugar was not controlled with metformin alone

One very important goal in managing type 2 diabetes is lowering your A1C level to a number agreed upon by you and your healthcare provider.

The combination of saxagliptin and metformin hydrochloride, the two medicines that make up KOMBIGLYZE XR, has been tested in multiple clinical studies in thousands of adult patients with type 2 diabetes. In all of these studies, KOMBIGLYZE XR, in addition to diet and exercise, has been shown to lower A1C levels.

These results are the average responses from the total population in these studies. Your personal results may vary.

Your healthcare provider will determine if KOMBIGLYZE XR could give you the kickstart you need to reach your A1C goals.

Talk to your healthcare provider to see if KOMBIGLYZE XR is right for you.

Please see Important Safety Information on pages 8-9. Click here for Medication Guide and click here for full Prescribing Information for KOMBIGLYZE XR (5/500, 5/1000, 2.5/1000 mg tablets), including Boxed WARNING about possible lactic acidosis.
What is the most important information you should know about KOMBIGLYZE XR?

Serious side effects can happen in people who take KOMBIGLYZE XR, including:

- Inflammation of the pancreas (pancreatitis) which may be severe and lead to death. Before taking KOMBIGLYZE XR, tell your doctor if you ever had pancreatitis, gallstones, history of alcoholism, or high triglyceride levels. Stop taking KOMBIGLYZE XR and contact your doctor right away if you have pain in your stomach area (abdomen) that is severe and will not go away. The pain may be felt going from your abdomen through to your back. The pain may happen with or without vomiting. These may be symptoms of pancreatitis.

24-WEEK CLINICAL STUDY

A 24-week clinical study involved 1,306 adult type 2 diabetes patients whose blood sugar was not controlled enough by diet and exercise. Of these patients, 643 were given saxagliptin plus metformin IR, 335 were given saxagliptin plus placebo and 328 were given a placebo plus metformin IR.

The patients started the study with an A1C of 9.4% to 9.6%, on average.

After 24 weeks, results showed significant A1C reduction.

Patients who took saxagliptin plus metformin IR:

- lowered their A1C by 2.5% on average
- 60% of patients reached an A1C goal of less than 7%*

*Your results may vary

Talk to your healthcare provider to see if KOMBIGLYZE XR is right for you.

Please see Important Safety Information on pages 8-9. Click here for Medication Guide and click here for full Prescribing Information for KOMBIGLYZE XR (5/500, 5/1000, 2.5/1000 mg tablets), including Boxed WARNING about possible lactic acidosis.
KOMBIGLYZE XR IS BELIEVED TO WORK IN 4 DIFFERENT WAYS to help control blood sugar

Not all medicines for type 2 diabetes work the same way. The graphic below demonstrates how KOMBIGLYZE XR is believed to work in four different ways to help control blood sugar.

1. works to decrease the amount of sugar absorbed by the gut
2. works to reduce the amount of sugar made by the liver
3. helps the body respond better to its own insulin
4. helps your body make more insulin when you eat

What is the most important information you should know about KOMBIGLYZE XR?

• Heart failure. Before taking KOMBIGLYZE XR tell your doctor if you have ever had heart failure or problems with your kidneys. Contact your doctor right away if you have any of the following symptoms of heart failure: increasing shortness of breath or trouble breathing, especially when you lie down; an unusually fast increase in weight; swelling or fluid retention, especially in the feet, ankles or legs; unusual tiredness

Talk to your healthcare provider to see if KOMBIGLYZE XR is right for you.

Please see Important Safety Information on pages 8-9. Click here for Medication Guide and click here for full Prescribing Information for KOMBIGLYZE XR (5/500, 5/1000, 2.5/1000 mg tablets), including Boxed WARNING about possible lactic acidosis.
ONCE-A-DAY KOMBIGLYZE XR must be taken as prescribed

KOMBIGLYZE XR is generally taken once a day with your evening meal to help lessen an upset stomach side effect. Swallow the tablets whole—don’t crush, cut, or chew them, and don’t change your dose without speaking with your healthcare provider.

When taking KXR, be sure to contact your doctor right away if you have a fever, trauma, infection or surgery as this may change your medication needs.

Stay on your prescribed diet and exercise program while taking KOMBIGLYZE XR.

Your healthcare provider should request blood tests to check how well your kidneys are working before and during your treatment with KOMBIGLYZE XR.

Important Safety Information for KOMBIGLYZE XR

• Low blood sugar. If you take KOMBIGLYZE XR with another medicine that can cause low blood sugar (hypoglycemia), such as sulfonylureas or insulin, you have a higher risk of having low blood sugar. Symptoms of low blood sugar include, shaking, sweating, rapid heartbeat, change in vision, hunger, headache and change in mood. Follow your doctor’s instructions for treating low blood sugar.

• Joint pain. Some people who take medicines called DPP-4 inhibitors, one of the medicines in KOMBIGLYZE XR, may develop joint pain that can be severe. Call your doctor if you have severe joint pain.

Talk to your healthcare provider to see if KOMBIGLYZE XR is right for you.

Please see Important Safety Information on pages 8-9. Click here for Medication Guide and click here for full Prescribing Information for KOMBIGLYZE XR (5/500, 5/1000, 2.5/1000 mg tablets), including Boxed WARNING about possible lactic acidosis.
ELIGIBILITY AND TERMS OF USE

ELIGIBILITY: You may be eligible for this offer if you are insured by commercial insurance and your insurance does not cover the full cost of your prescription, or you are not insured and are responsible for the cost of your prescriptions. Patients who are enrolled in a state or federally funded prescription insurance program are not eligible for this offer. This includes patients enrolled in Medicare Part D, Medicaid, Medigap, Veterans Affairs (VA), Department of Defense (DOD) programs or TRICARE, and patients who are Medicare eligible and enrolled in an employer-sponsored group waiver health plan or government-subsidized prescription drug benefit program for retirees. If you are enrolled in a state or federally funded prescription insurance program, you may not use this savings card even if you elect to be processed as an uninsured (cash-paying) patient. This offer is not insurance, is restricted to residents of the United States and Puerto Rico, and to patients over 18 years of age.

TERMS OF USE: Eligible commercially insured patients with a valid prescription for KOMBIGLYZE® XR (saxagliptin and metformin HCl extended-release) who present this savings card at participating pharmacies will pay as low as $0 per 30-day supply maximum savings limit applies; patient out-of-pocket expense may vary. If you pay cash for your prescription, AstraZeneca will pay up to the first $150, and you will be responsible for any remaining balance, for each monthly prescription. Other restrictions may apply. Patient is responsible for applicable taxes, if any. Non-transferable, limited to one per person, cannot be combined with any other offer. Void where prohibited by law, taxed or restricted. Patients, pharmacists, and prescribers cannot seek reimbursement from health insurance or any third party for any part of the benefit received by the patient through this offer. AstraZeneca reserves the right to rescind, revoke, or amend this offer, eligibility and terms of use at any time without notice. Offer must be presented along with a valid prescription at the time of purchase. For additional details about this offer, please visit www.kombiglyzesavings.com. If you have any questions regarding this offer, please call 1-855-907-3197.

BY USING THIS CARD, YOU AND YOUR PHARMACIST UNDERSTAND AND AGREE TO COMPLY WITH THESE ELIGIBILITY REQUIREMENTS AND TERMS OF USE.

*Eligible commercially insured patients can get KOMBIGLYZE XR for as low as $0 per month for as long as your doctor prescribes it.

Please see Important Safety Information on pages 8-9.

IMPORTANT SAFETY INFORMATION FOR KOMBIGLYZE XR (cont’d)

- **Heart Failure.** Before taking KOMBIGLYZE XR tell your doctor if you have ever had heart failure or problems with your kidneys. Contact your doctor right away if you have any of the following symptoms of heart failure: increasing shortness of breath or trouble breathing, especially when you lie down; an unusually fast increase in weight; swelling or fluid retention, especially in the feet, ankles or legs; unusual tiredness.

- **Low blood sugar.** If you take KOMBIGLYZE XR with another medicine that can cause low blood sugar (hypoglycemia), such as sulfonylureas or insulin, you have a higher risk of having low blood sugar. Symptoms of low blood sugar include, shaking, sweating, rapid heartbeat, change in vision, hunger, headache and change in mood. Follow your doctor’s instructions for treating low blood sugar.

- **Joint pain.** Some people who take medicines called DPP-4 inhibitors, one of the medicines in KOMBIGLYZE XR, may develop joint pain that can be severe. Call your doctor if you have severe joint pain.

- **Skin reaction.** Some people who take medicines called DPP-4 inhibitors, like one of the active ingredients in KOMBIGLYZE XR, may develop a skin reaction called bullous pemphigoid that can require treatment in a hospital. Tell your doctor right away if you develop blisters or the breakdown of the outer layer of your skin.

Tell your healthcare provider:

- if you are pregnant, breast-feeding, or plan to become pregnant or breast-feed
- if you will be starting or stopping certain other types of medicines, such as antibiotics, or medicines that treat fungus or HIV/AIDS, as your doctor may need to change your dose of KOMBIGLYZE XR

How to take KOMBIGLYZE XR:

Swallow KOMBIGLYZE XR whole; do not crush, cut, or chew.

The most common side effects of KOMBIGLYZE XR include upper respiratory tract infection, stuffy or runny nose and sore throat, urinary tract infection, headache, diarrhea, and nausea and vomiting.

You are encouraged to report negative side effects of prescription drugs to the FDA. Visit [www.FDA.gov/medwatch](http://www.FDA.gov/medwatch) or call 1-800-FDA-1088.

1. What is my A1C now?
2. What is my A1C goal?
3. Can KOMBIGLYZE XR help lower my A1C?
4. What important safety information should I know?

Before your next appointment:

1. Make a list of any changes to the medicines you’re taking.
2. Bring notes or questions about your treatment options.
3. Ask about the right type 2 diabetes medicine for you.
